CITY GOVERNMENT OF SAN PABLO
PAMANTASAN NG LUNGSOD NG SAN PABLO

CHED Recognized Local College
TESDA Recognized Programs
ALCU Commission on Accreditation – Level 1 Re-Accredited
Member, Association of Local Colleges and Universities
Member, Local Colleges and Universities Athletic Association, Inc.

Course Code: Technopre

Instructor: Ms. Ma. Ara Lovela G. Pahutan,LPT

Name of Student: Tenorio, Dennison Ruben L.

Program/Yr. and Sec.: BSIT/WGD-3A

Term: 1st Sem

Date: October 21, 2025

Direction:

1. Answer the following guide questions, the length of discussion is limited to **3-5 sentences is enough to briefly elucidate your thoughts.**
2. Use this learning data sheet as an answer sheet. **Indicate your answer after the questions. Highlight the questions and your answers.** Indicate your references and sources.

Questions

Factors That Influence Entrepreneurial Venture

1. What is an entrepreneurial venture, and why is it important in economic development?

An entrepreneurial venture represents a newly formed business organization that seeks to identify and exploit market opportunities through innovative solutions or business models. Its significance in economic development lies in its capacity to drive technological advancement, create jobs, and contribute to GDP growth. Entrepreneurial ventures serve as catalysts for structural economic transformation by introducing disruptive innovations that challenge established industries and create entirely new market segments.

2. How do personal characteristics of an entrepreneur influence the success of a new venture?

Entrepreneurial characteristics including self-efficacy, opportunity recognition ability, and tolerance for ambiguity directly correlate with venture performance outcomes. Research indicates that entrepreneurs with high internal locus of control demonstrate greater persistence when facing obstacles, while those with strong networking capabilities secure resources more effectively. Additionally, cognitive flexibility enables entrepreneurs to pivot their business models in response to market feedback, significantly improving survival rates during critical early-stage development.

3. In what ways can economic conditions impact the decisions of entrepreneurs when starting a business?

Macroeconomic factors create both constraints and opportunities that shape entrepreneurial strategy formulation. During periods of economic expansion, increased access to venture capital and favorable lending conditions encourage aggressive growth strategies and market entry. Conversely, recessionary periods may stimulate necessity-driven entrepreneurship as individuals pursue self-employment alternatives, though these ventures typically operate with leaner business models and more conservative financial projections to mitigate heightened market uncertainty.

4. How does access to technology and innovation affect the growth of entrepreneurial ventures?

Technological infrastructure determines the scalability potential and operational efficiency of entrepreneurial ventures across all sectors. Digital platforms reduce barriers to market entry by lowering customer acquisition costs and enabling global reach without corresponding increases in physical infrastructure. Furthermore, emerging technologies such as artificial intelligence, blockchain, and cloud computing allow startups to compete with established firms by automating processes and delivering personalized customer experiences at scale.

5. Why is government policy considered a major factor in influencing entrepreneurial activities?

Regulatory frameworks and institutional quality fundamentally shape the entrepreneurial ecosystem by affecting transaction costs, market accessibility, and risk-return calculations. Policies governing intellectual property protection encourage innovation investment, while streamlined business registration procedures reduce time-to-market for new ventures. Additionally, government-sponsored incubators, tax incentives for research and development, and procurement programs that favor small enterprises create supportive conditions that increase both the quantity and quality of entrepreneurial activity within an economy.
